

Combat Robotics Team

Team leaders

Noah Imel	President
Nick Askew	Vice President
Jeffrey Payne	Treasurer

Faculty adviser

Warren White, MNE associate professor

The K-State Combat Robotics Team is a group of engineering students working together to design and build robots that battle in gladiator-style competitions on the regional and national level.

Utilizing skills learned from their classes and partnering with local manufacturing companies to learn more about designing and machining parts, team members have been able to hone valuable skills regarding teamwork, leadership and communication. The overall goal of the group is to bring manufacturing and machining careers to the spotlight in an interesting, fun and educational way.

With a new team in 2017, members have plans to compete in the BotsKC competition in Kansas City as well as the National Robotics League competition.
