Seniors

Seniors in CE 585 or Senior Design have been working on this semester’s senior project. Each semester a new project is given to graduating seniors to simulate a real world design project. Once the problem was given to the students the class was divided into six teams. Members of each team worked together to complete subtasks assigned to complete Task 1 of the project. Tonight, one member from three teams will present a subtask from Task 1.

Millau Viaduct

Located in France the Millau Viaduct is the world’s tallest bridge at a max height of 1,125 above the base of the structure. The bridge has 4 lanes and a total length of 1.5 miles long. The bridge cost around 50 million dollars and 4 years to construct. The bridge required about 166,000 cubic yards of concrete and 21,000 tons of steel. At its highest point the Millau Viaduct is taller than the Eiffel Tower.

A bridge from Paris to Spain was needed due to cut travel time to southern France. Before the bridge was constructed traffic had to descend into a valley and pass through the town of Millau. The bridge now allows drives to cross the valley without going into town.
